# 1 Introduction

People watch movies, series for entertainment purpose. Information about the movie can be very useful for people.

Like if someone wants to watch a movie, he/she can see the review before watching the movie. As a result, one will get an upper hand before watching it.

# 2 Problem Domain

- If a person wants to watch a movie/series, he/she may need the review, the date of release etc.

# 3 Motivations

- We proposed a website with good UI/UX, where the user will find his/her desired information.

# 4 Objectives

The major objectives we are going to focus on are:

- To develop a web-based platform which will provide information about movies/series.
- To develop a satisfying UI/UX.

# 5 Related Works

To understand the depth of the work, we need to understand the basic concept of web design, web development, user experience.

The most important part of the system is data.

The data in our website has to be accurate. Otherwise, users may be misled with wrong information.

Rotten Tomatoes [1] is a similar kind of website, which gives reviews on movies, series etc. It was launched on August 12, 1998.

## 6 Proposed Methodology

Fig 1 shows the tree diagram of our website. It also shows the user experience flow.
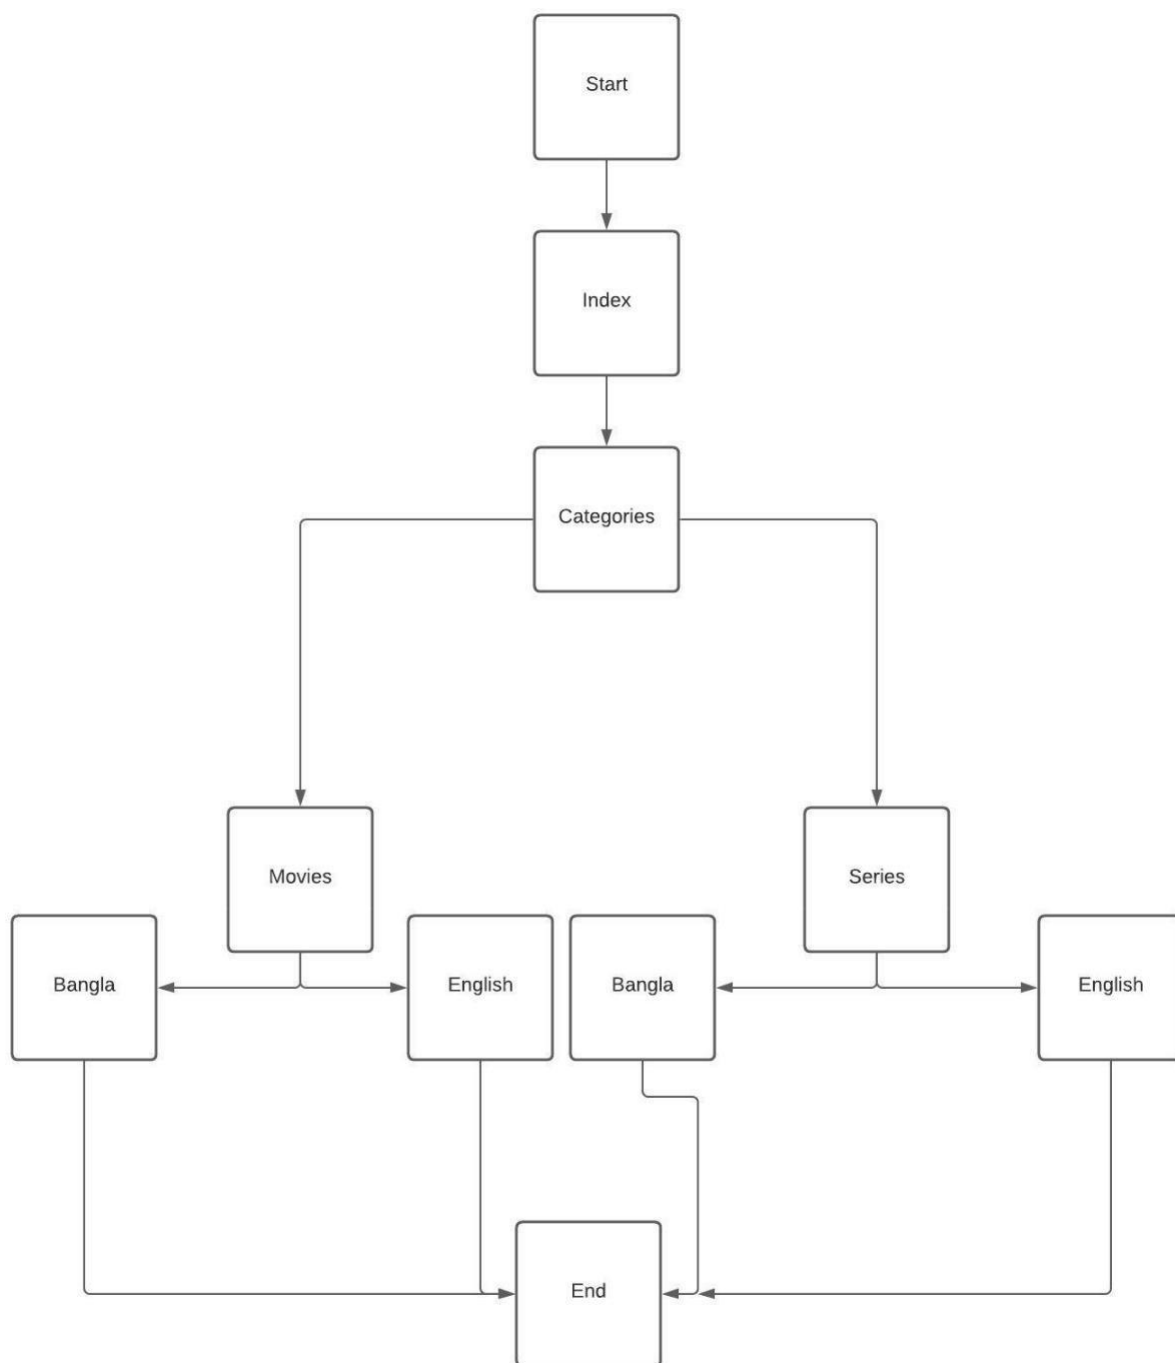

Fig 1: Block diagram of proposed
methodology

## 7 Main Features of the Research

The proposed technique, tools and methodology are very known and easily collectable for the target users.

Users can access the website from any location at any time around the globe.

An admin panel will be added which will create, update and delete posts.

## 8 Scope of the Research

This research specifically focuses on correct data and user experience.

This website can be used to get valuable information about movies/series.

I hope that my website will be useful to people who wants information about movies/series, but the user has to know English as everything in my website will be written in English.

## 9 Sustainability of our proposed system

By ensuring the use of updated methods, tools and techniques to implement the proposed system ensures the sustainability of the research project. The system will be implemented in web-based platform that the user can use this system anytime from anywhere.

## 10 Attachments
- Budget of The Research Project (Total budget = BDT (1,332,000.00) Thirteen lac thirty two thousands only ), attached with the application.
- Working plan of the project (Total Duration= 4 months), attached with application.

- Human resource plan of the research project (Total HR= 2 person), attached with the application.

## 11 Conclusion

In this proposed research, I have proposed a website that will give information about movies and series. I have apparently focused on correctness of data and user experience.
The system didn't taste commercial usage, but I hope that it will work
practically.

## References

[1] Rotten Tomatoes is an American review-aggregation website for film and television. The company was launched in August 1998 by three undergraduate students at the University of California, Berkeley: Senh Duong, Patrick Y. Lee, and Stephen Wang
